Under the Hood: Xfinity’s Most Powerful Gateway

Comcast’s next-generation xFi Advanced Gateway, it’s first device capable of delivering true multi-gigabit speeds, will roll out to customers in the coming months. Here’s a look inside of what makes Comcast’s best-in-class, in-home WiFi coverage possible:

Certified for advanced connectivity: WiFi 6 Certification means the xFi Advanced Gateway is designed for high-performance users to handle more capacity and faster speeds.

Unprecedented range: Designed with the latest WiFi technology, including four simultaneous dual-band antennas that support both 2.4 GHz and 5 GHz bands, allowing gigabits of data to move with ease.

Complete coverage: Combined with xFi pods, customers can create their own personalized mesh home WiFi networks.

Hit it with your best shot: This gateway delivers exceptionally lower latency for an unrivaled cloud and online gaming, 4K video streaming, and VR and AR experiences, as these applications increasingly become mainstream.

Thoughtful design that fits in with our customer’s homes and lives.

Built for speed: A 2.5Gbps Ethernet port to support wired speeds greater than 2 Gbps.

Serious versatility: Bluetooth LE and Zigbee radios capable of connecting to virtually any IoT device.
